

Linux for System z with z/VM

Course Information

Course Description

This hands-on workshop covers the basics & beyond of installing & running Linux servers hosted by z/VM on an IBM System z mainframe. Each day includes questions & lab exercises to reinforce all concepts.

Benefits

Learn:

- the histories of z/VM & Linux
- installation of Linux on z/VM
- operating system management
- performance considerations
- cloning Linux images
- exploiting unique z/VM features for Linux
- and much, much more!

Prerequisites

Familiarity with basic CP & CMS commands.

Who Should Attend

Systems programmers, administrators or anyone else who must to be able to understand and support a z/VM-based Linux implementation.

Instructors

Instructors are z/VM & Linux experts who have implemented, used, and taught Linux for System z since IBM introduced it in May, 2000. They are experienced seminar leaders who regularly make presentations at user group meetings, IBM, and other mainframe industry conferences.

Location

The course is taught onsite at customer locations. Call 360 543-5826 to obtain a more detailed course agenda and arrange for a course to be taught at your site.

Course Fees

Onsite fees are \$1,500 per day for one to ten people, plus an additional \$125 per person per day for additional students. Volume discounts are available for class sizes exceeding fifteen people.
